(Now Available)

**Ashlar**  
Wallmat

	Corner Size	Approx. Crate Weight
	Approx. 6" & 10"	1210 lbs./ea.
Corner	Per Crate	
	117 corners (71 lf.)	

**Tuscan Suede**

Bring that "OLD WORLD" feel with innovative modular design for streamlined installation.

	Size Per Mat	Approx. Mat Weight
	2.7 sq. ft.	35 lbs./13 lbs. per sq. ft.
	Avg. Piece Thickness	Per Crate
	Approx. 1" - 1 1/2"	30 mats (81 sq. ft.)

**Ashlar Wallmat**

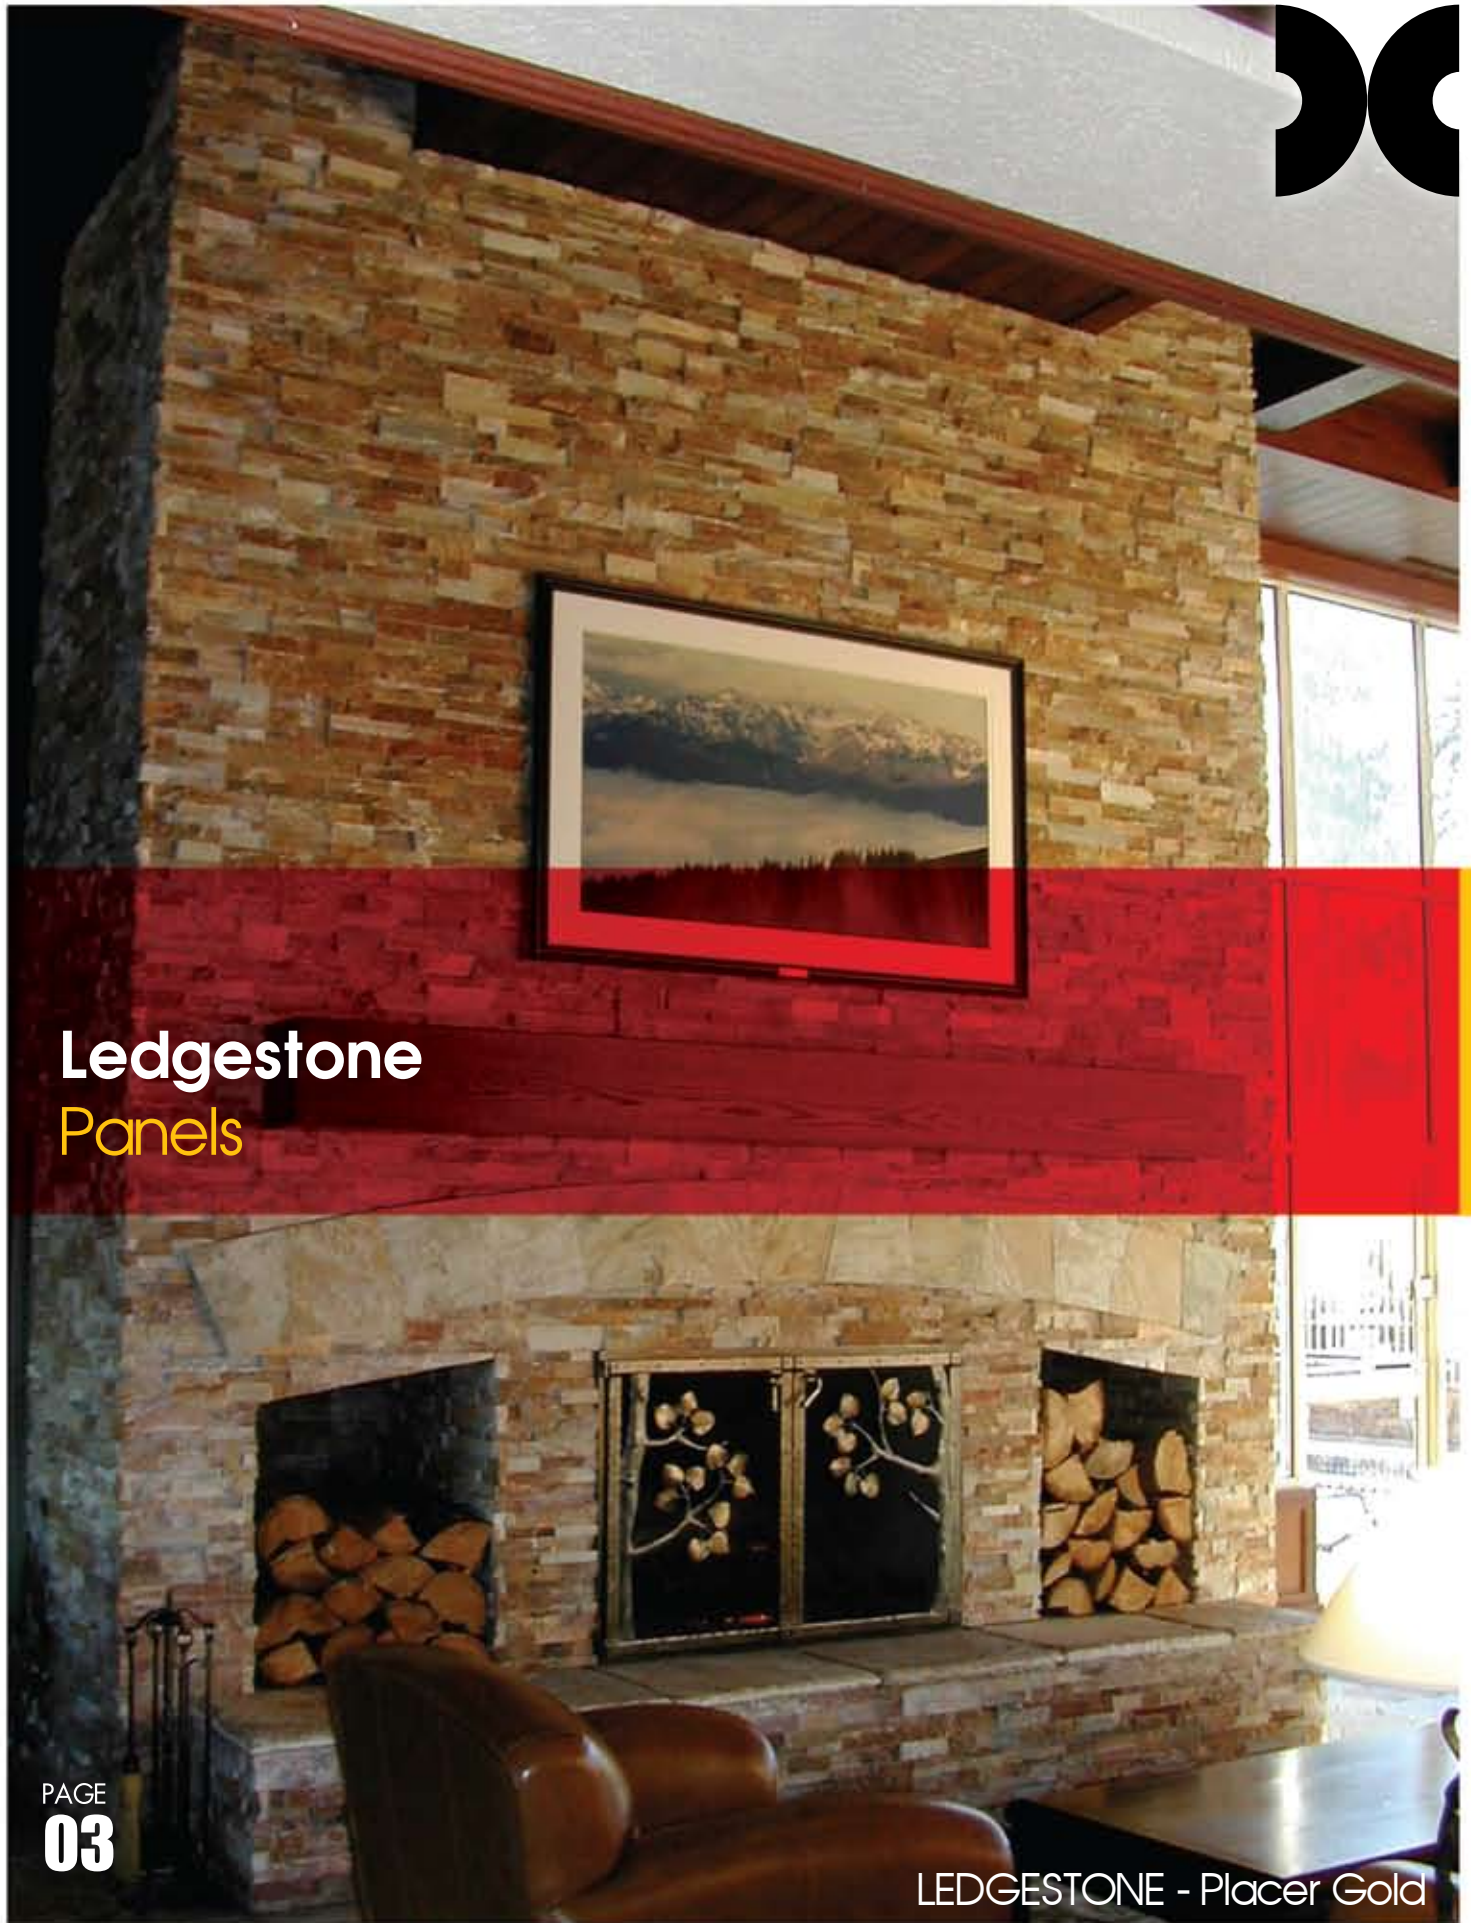

ROX PRO Ashlar Wallmat consists of hand-selected pieces of high-quality sandstone, trimmed and tumbled into classic "Old World" Ashlar pattern pieces. The pieces are affixed to modular mats, which have the look of a loose Ashlar pattern, but with the same streamlined installation and added value that ROX PRO is known for. See for yourself how quickly, easily and cost-effectively you can enjoy the timeless benefits of this beautiful stone in your design. Bring the beauty of nature into your design with ROX PRO.

**About Us**

As the world leader in modular natural stone, it is the sole focus of ROX PRO to bring the highest quality and most innovative natural stone systems and products to an ever changing market. We are committed to growing our product line to meet design trends and styles while offering unsurpassed service and support.

Discerning clients demand distinction on their projects and require innovative solutions that will not only enhance the overall appearance, but also add value and lasting quality that only real stone can offer. With our complete line of products and accessories in design friendly families of colors, ROX PRO is the answer.

# Ledgestone Panels

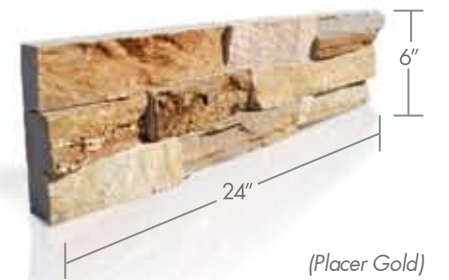

LEDGESTONE - Placer Gold

Alpine Jade      Autumn Horizon      Black Mountain      Placer Gold      Sierra Blue

Size Per Panel	Weight	Avg. Panel Thickness	Dimension	Panels Per Crate
Approx. 1.0 sq. ft.	18 - 20 lbs./ea.	Approx. 1/2" - 2"	6" h x 24" w	90

Colors available: *Alpine Jade, Autumn Horizon, Black Mountain, Placer Gold, Sierra Blue*

(Placer Gold)

## Ledgestone Panels

ROX PRO LEDGESTONE PANELS are hand selected and trimmed pieces of natural ledgestones affixed together to form modular ROX PANELS which allows for the streamlined installation of drystacked ledgestone veneer. Exterior and interior design applications will benefit from the timeless beauty and lasting quality of natural stone. The introduction of modular panels will bring affordability back to the installation of ledgestone veneered walls where natural stone is desired. ROX PRO should be your NATURAL choice for real stone.

*Installation of natural ledgestone becomes a reality with ROX PANELS. The labor-intensive process of "drystacking" individual ledgestones is eliminated with our innovative solution to a traditional application.*

## LedgeStone Light Panels

ROX PRO LEDGESTONE LIGHT PANELS are hand selected and trimmed pieces of natural ledgestones affixed together to form modular ROX PANELS. The LedgeStone Light series provides a look and surface similar to the popular LedgeStone Panels but resulting in slimmer modular panels. The decrease in panel thickness further streamlines installation of ledgestone veneered walls by keeping the weight per square foot to 15 lbs. or less thus eliminating the need for wall ties where local building codes allow. LedgeStone Light Panels are packaged 4 panels per box and are the newest addition to the ROX PRO line of modular stone panels.

*Installation of natural ledgestone is further streamlined with the new LedgeStone Light Panels. The lighter weight and modular form provides another alternative to a popular application.*

## Craftsman Panels

ROX PRO CRAFTSMAN PANELS are hand selected pieces of natural stones affixed together to form modular ROX PANELS. This allows for the streamlined installation of drystacked stone veneer. The CRAFTSMAN PANEL works well in both interior and exterior applications and compliments our entire line of natural stone components. The unique clefting inherent to the CRAFTSMAN style panel will compliment a wide range of design criteria wherever natural stone is desired.

*The modular installation of natural craftsman becomes a reality with ROX PANELS. The labor-intensive process of "drystacking" individual stones is eliminated with our innovative solution to a traditional application.*

Colors available: *Alpine Jade, Autumn Horizon, Black Mountain, Placer Gold, Sierra Blue, Mocha Mesa*

## Prairie Panels

ROX PRO PRAIRIE PANELS utilize hand selected, trimmed and beveled pieces of natural stone affixed together in a random blend to form modular panels which allow for the streamlined installation of stone veneer. As with LEDGESTONE and CRAFTSMAN PANELS, the PRAIRIE PANEL will transition from exterior to interior applications. Outdoor living areas such as BBQ islands, fireplaces and pools create ideal opportunities to incorporate PRAIRIE PANELS into unique designs. ROX PRO natural stone is a sure way to add value to your next project.

*Unique styling makes PRAIRIE PANELS a good choice for that new look that is ideal for interior or exterior applications, especially where space due to thickness or profile may be of concern. The 5/8" to 3/4" thickness allows for flexibility where clearance is an issue. The modular design of PRAIRIE PANELS will create savings by streamlining installation.*

## Limited Panels

ROX PRO LIMITED PANELS are the newest addition to ROX PRO's innovative natural modular stone line. LIMITED PANELS are hand-crafted using high-quality natural stone, and offer the same performance and design benefits for which ROX PRO is known, with unique colors and a 90-degree corner style. Discover the ROX PRO Difference and enjoy some of the world's most beautiful stone.

*The weathered surface limestone of Corona d'Oro Limited Panels offers a distinctive and luxurious, highly textured feel with subtle hues of beige, gray, and red to enhance the beauty in your project.*

*Sienna Sunset Limited Panels exemplify how hand-crafting with a very special slate product in varying dimensions can result in a spectacular spectrum of depth and vibrant color.*

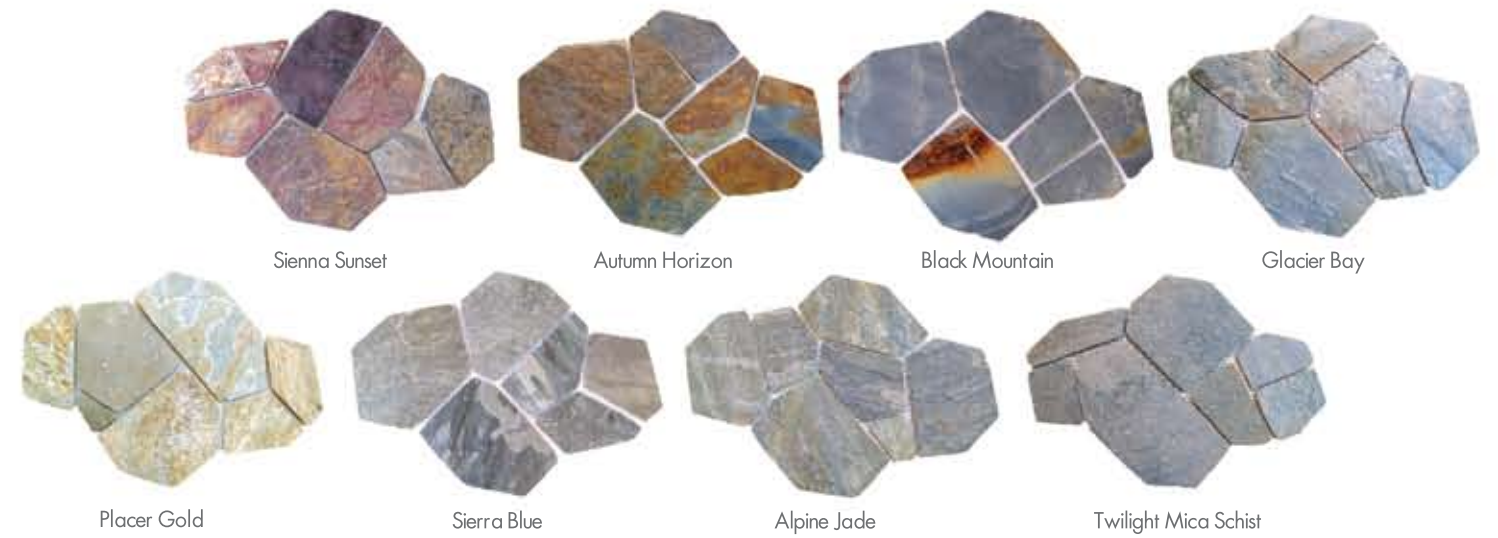

Available Components		
		
Standard Panel	Single Finished End	90 Degree Corner

	Dimension 6" x 1" x 1" <i>Corona d'Oro (use Placer Gold), Sienna Sunset (use Autumn Horizon)</i>
Limited Panel Inside Corner	Corners Per Crate: 72 per box = 36 lf. 2160 lf. per crate

## Flagmats

ROX PRO FLAGMATS are hand selected pieces of flagstone adhered to mesh matting that allow for modular installation of flagstone paving. Whether its new construction or a retrofit overlay, consider the benefits of natural stone and the savings of streamlined installation. Imagine the time that can be saved when using ROX PRO FLAGMATS on your project. The modular design of each mat enables the installer to place up to 5.4 square foot sections down at a time, avoiding the labor intensive task of cutting, fitting and placing normal flagstone. Most of the puzzling, cutting and fitting has been done for you.

NATURAL STONE TILES

Pool Coping	Pool coping comes in 24" lengths and widths of 9" or 12". The average thickness of this product is 1 1/2" - 2" with a natural chipped edge bullnose on one side. Colors available: Autumn Horizon, Black Mountain, Placer Gold, Sierra Blue, Tuscan Suede.
Wall Cap	Wall caps are 24" in length with widths available in 10" or 12". The average thickness of this product is 1 1/2" - 2" and the natural chipped edge bullnose is on both sides. Colors available: Autumn Horizon, Black Mountain, Placer Gold, Sierra Blue, Tuscan Suede.
Wainscot Sill	Wainscot/Sill caps are a natural selection to finish off LedgeStone Wainscot applications. They come in 12" lengths and are 2 3/4" wide and have the approximate height of 1 3/8" in front and 1 3/4" in back resulting in a slight bevel. Colors available: Alpine Jade, Autumn Horizon, Black Mountain, Corona d'Oro, Mocha Mesa, Placer Gold, Rocky Mountain, Sienna Sunset, Sierra Blue, Tuscan Suede
Natural Stone Tile	Natural stone tile will compliment our entire product line. Covering an entire floor or simply used as an accent border, these tiles are an excellent addition to any project. Available in sizes of 12" x 12" or 18" x 18." Colors available: Autumn Horizon, Black Mountain, Placer Gold, Sierra Blue.

Accessories

ROX PRO ACCESSORIES allow for endless flexibility and ease of design by providing finish detail pieces in our core family of colors. From interiors to exterior applications, with an extensive selection of colors and a full line of natural stone components, ROX PRO is the NATURAL choice for real stone.

*Special order sizes, colors and edge treatments are available. Please consult your dealer or ROX PRO representative for more information. With ROX PRO Accessories your project is complete.*

# Installation Guide

## Ledgestone Panel Installation

### VENEER OF A WALL WITH 90 DEGREE CORNER USING STANDARD AND CORNER ROX PANELS

#### Step 1:

The substrate should be structurally sound, clean, dry and free of debris. The substrate should be of cementitious material. For illustration purposes, our "mock wall" was built with wood framing sheeted with cement backerboard. Acrylic fortified thin set mortar (Laticrete 254 Platinum, 255 Multimax or equal) is recommended for setting mortar.

#### Step 2:

Select a 90 degree corner as a starting point and "parge" the substrate with mortar using a notched trowel. Make sure the corner pieces are cut at varying lengths at each course, which will create a "staggered" bond and greatly reduce the appearance of vertical "seams" when the wall is complete.

#### Step 3 - 4:

Apply mortar to the back of panel using a notched trowel and press it firmly to assure proper adhesion and no voids. A rubber mallet works well to achieve proper adhesion to the substrate. This will create a "lead" corner. Work outward in both directions until a first course has been built, periodically checking for level.

#### Step 5 - 6:

Continue the above steps until the desired height has been achieved.

*Our sample wall is a typical "wainscot" application and has been capped with our matching wainscot cap. Where installation height exceeds IBC or local building codes, it is necessary to use wall ties. It is the responsibility of the installer to check local building codes and/or consult with the project engineer or architect.*

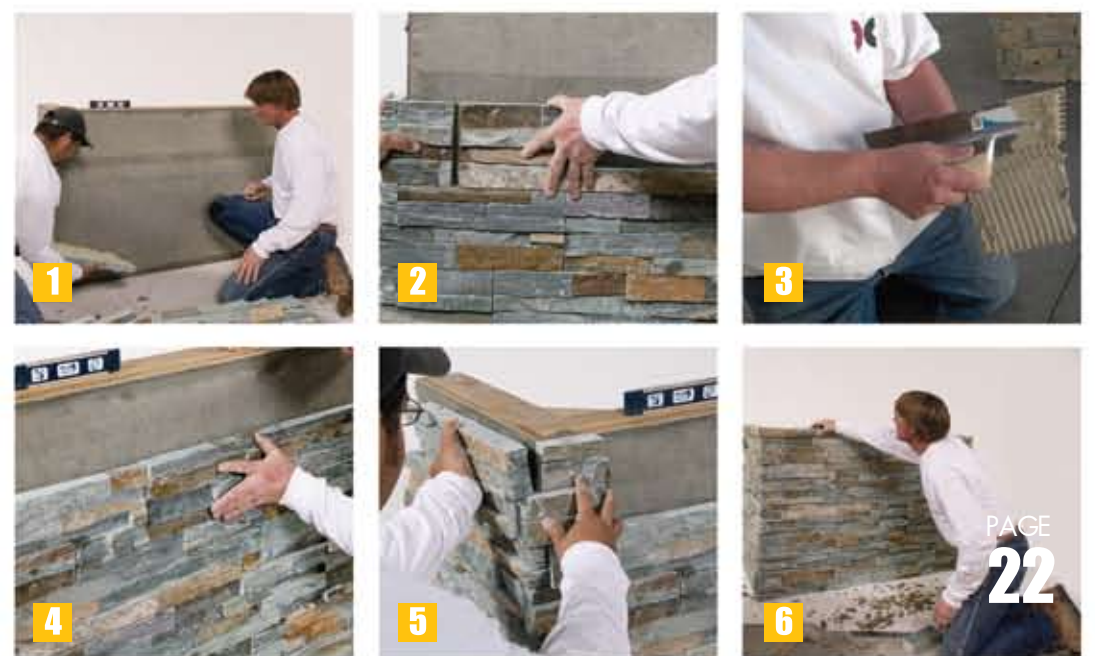

## Installation Guide

### Ledgestone Panel Installation

Installation of Wall Veneer Using Ledgestone Panels

[www.realstonesource.com](http://www.realstonesource.com)

*Substrates and job conditions will vary greatly from site to site, therefore it is the responsibility of individual project engineers to review and approve the suitability of mechanical anchors (wall ties) and the structural integrity of surfaces to be veneered.*

## INSTALLATION GUIDE FOR FLAGMAT USING ROX PRO FLAGMAT

**Useful Tip:** Placing FLAGMATS “dry” onto the surface before mortar is used will insure a streamlined, consistent project.

### Step 1:

A concrete sub-base with a minimum thickness of 3 1/2” is recommended. Sub-base shall be clean, dry, and free of dirt, debris, oil, sealers and grease, etc. (Type S mortar or equal is recommended for setting mortar.) Start by spreading a mortar bed of approx. 1/2” thick and the approx. size of a FLAGMAT.

### Step 2:

Place the FLAGMAT in the desired position and work it into the mortar bed using firm pressure to ensure 100 percent adhesion.

### Step 3:

As pictured, a rubber mallet works well to set the stone in the mortar bed. A straight-edge or level can also be used to ensure a uniform surface.

### Step 4 - 6:

Continue the “modular” placement of FLAGMATS throughout the project. Traditional saw-cutting and grouting are acceptable when installing FLAGMATS.

*For tips on cutting FLAGMATS at corners and against walls or straight edges, please refer to our installation guidelines using a template. The modular design of ROX PRO FLAGMATS will allow the installer to place up to 5.4 sq. ft. sections down at a time, avoiding the labor intensive task of cutting, fitting and placing normal flagstone. Most of the skilled labor has been done for you.*

## USING A TEMPLATE TO FIT MATS TO A WALL

**Useful Tip:** To prepare multiple templates for larger projects, lay a flagmat on top of construction paper and cut templates using a utility knife. Place these templates against the wall and mark or cut template to fit the wall.

### Step 1 - 2:

Lay a piece of construction paper down against the wall and draw a template of the open space using chalk or a pencil.

### Step 3 - 4:

Lay your template down over your flagmat and mark your cuts on top of the stone flagmat.

### Step 5:

Cut your flagmat using a circular saw with a masonry blade.

### Step 6:

Insert flagmat.

## Installation Guide Flagmat Installation Installation of ROX PRO Flagmats

## Installation Guide Flagmat Installation Using a Template to Fit Mats to a Wall

# Installation Guide

## Ashlar Wallmat Installation

### INSTALLATION GUIDE FOR ROX PRO ASHLAR WALLMAT

#### Step 1:

Ensure substrate is structurally sound, clean, dry and free of debris. The substrate should be of cementitious material. Type S mortar with acrylic fortifier (added per manufacturer's recommendation) is suggested for setting mortar. In order to prepare for installation, stack the mats upside down (mat side exposed) for easier cutting and access.

#### Step 2:

Prepare a template of the wallmat using any type of cardboard. Lay a mat on top of the cardboard and trace the mat and cut the outline. Be sure to place an indication as to the mat's front versus the back on the cardboard.

#### Step 3 - 4:

Place a corner on the wall to determine where your template will start. Next, place your template on the wall and trace the outline. This will give you your starting point for installation. Then, set your first corner piece as shown.

#### Step 5 - 7:

Take the first mat and cut it into a manageable size. You would typically cut the mat into two or three parts. Butter the back of the stones with mortar and place the stones and mat on the wall within the outline of the template. As we previously noted, it is important to mark your cardboard template to indicate front & back. This way, you can be sure your next module will be a perfect fit.

Continue to follow the previous steps throughout the installation process. The use of the template simplifies the installation process. This is made especially clear at such important points as the installation of wall ends and corners. When you come to an inside corner, use the template to determine the proper size and cut the stone to fit.

#### Step 8:

Once you have completed installation of the mats, follow conventional grout methods to comply with the desired finished appearance.

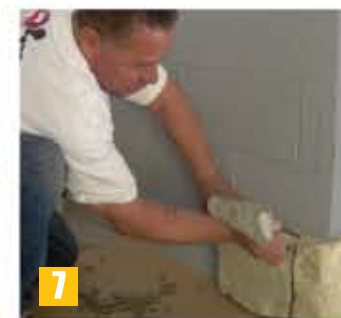

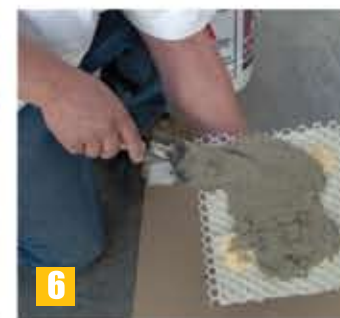

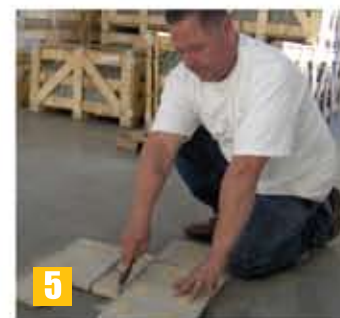

## Installation Guide

### Ashlar Wallmat Installation

Installation of Veneer Using Ashlar Wallmat

*Please note that suggested installation procedures need to be approved by the engineer of record.*

# Installation Guide

## Corner Panel Column Installation

### CONSTRUCTION OF 24" X 24" LEDGESTONE COLUMNS USING DOUBLE ENDED LEDGESTONE CORNER PANELS

#### Installation Guidelines:

Start by pre-constructing a 20" x 20" column "substrate" using 6" x 8" x 14" concrete block. The structure should have an adequate foundation capable of supporting the mass and weight of a stand alone column. Steel reinforcing and solid grout are also recommended as per local building codes. Acrylic fortified thin set mortar (Laticrete 254 Platinum, 255 Multimax or equal) is recommended for setting mortar.

#### Step 1 - 2:

Start at the bottom and "parge" the structure with mortar, "butter" the back of a panel and press it firmly onto the substrate to assure proper adhesion. "Chase" the ledgestone panels around the column following the above steps until a "first course" is built.

#### Step 3:

Periodically check for level. As pictured, a rubber mallet works well to achieve proper adhesion to the substrate.

#### Step 4:

Continue up the column with each course until the desired finished height is achieved.

#### Step 5 - 6:

Place a 27" x 27" ROX PRO Column Cap using a 1/2" mortar bed.

*As pictured, beautiful corners have been created in this incredibly easy to assemble column which can be used in many landscape applications. No matter the application, a matching 27" x 27" cap is the finishing touch for a spectacular ledgestone column.*

## Installation Guide

### Corner Panel Column Installation

Veneering a Column with Ledgestone Corner Panels

[www.realstonesource.com](http://www.realstonesource.com)

*Suggested installation procedures need to be approved by the engineer of record.*

# Installation Guide

## Column Block Installation

### COLUMN BLOCK INSTALLATION GUIDE

#### Installation Guidelines

##### Step 1:

Set first column block onto foundation and check that top is level. The column should have an adequate foundation capable of supporting the mass and weight of a stand alone column. Steel reinforcing and solid grout are also recommended as per local building codes.

##### Step 2:

Place the next column block, check for level and using mortar, coat (parge) the inside area of the column at the joint to prevent leakage during grouting.

##### Step 3:

Repeat step 2 until desired height is reached.

##### Step 4:

Reach desired height but do not exceed 5' without proper engineering and approvals. Grout solid.

##### Step 5 - 6:

Place a 21"x 21" ROX PRO Column Cap using a 1/2" mortar bed.

*Add simplicity and beauty to your next fencing project. ROX COLUMN BLOCKS feature hand selected pieces of natural ledgestones that are assembled to form a stackable ledgestone column block. As with any lasting masonry structure, an adequate footing is required along with steel reinforcing and solid grout. Always refer to local building codes when constructing a column exceeding 5' in height.*
